PROFESSIONAL PROFILE

Cybersecurity analyst with a B.Sc. in Computer Science and practical focus on threat detection, incident response, digital forensics, and network defense. Built CyberGun, a modular malware-detection platform combining static signature analysis with machine-learning-driven behavioral detection. Familiar with SOC workflows, SIEM monitoring, detection engineering, memory and disk forensics, NIST-aligned reporting, and Python automation for faster triage. Seeking a SOC Analyst, Threat Detection, or Incident Response role with a remote-first team.

TECHNICAL EXPERTISE

SOC & THREAT DETECTION	SIEM monitoring and triage; alert tuning; threat hunting; threat intelligence; IOC extraction; Suricata, YARA and Snort rules.
INCIDENT RESPONSE & FORENSICS	NIST incident-response lifecycle; Volatility memory forensics; Autopsy disk forensics; timeline reconstruction; incident reporting.
MALWARE ANALYSIS	Static and dynamic analysis; sandbox behavioral analysis; ML-based malware classification.
NETWORK & VULNERABILITY	Wireshark; Zeek; Nmap; OpenVAS; Nessus; Fortinet; firewall policy; CVSS prioritization; Linux hardening.
SIEM, PLATFORMS & CLOUD	Splunk; IBM QRadar; Google Chronicle; Wazuh; Kibana; Git; GCP and AWS security.
PROGRAMMING	Python (PyQt5, Pandas, scikit-learn); Bash; PowerShell; C++; SQL; Regex; JSON.
OPERATING SYSTEMS	Windows; Kali Linux; Ubuntu; Arch; Red Hat; Parrot OS.

SELECTED PROJECTS

CyberGun — Static & Dynamic Threat Detection System

Python · PyQt5 · scikit-learn

- Designed a malware-detection framework combining static signatures with ML-driven behavioral detection.
- Built Behavioral, System Activity, USB Monitoring, and Sandbox Simulation modules coordinated by a custom DynamicEngine.
- Trained models on EMBER and CIC datasets; built a PyQt5 dashboard with asynchronous SignalBus messaging.
- Code: github.com/hckr-zahid

Network Intrusion Detection & Monitoring

Suricata · Zeek · Kibana

- Deployed a simulated NIDS to detect port scans, DoS activity, and possible data exfiltration.
- Tuned custom rules to reduce false positives and integrated telemetry into Kibana dashboards.

Ransomware Incident Response & Forensics — IBM Capstone

Volatility · Autopsy · NIST IR

- Investigated a simulated ransomware incident using the NIST incident-response framework.
- Analyzed memory and disk artifacts, reconstructed the timeline, and documented IOCs and remediation.

Python Security Automation Toolkit — Google Cybersecurity Project

Python · Regex · VirusTotal · AbuseIPDB

- Automated log analysis, IOC extraction, and suspicious-process checks using regex and OSINT APIs.
- Packaged scripts as command-line tools for repeatable SOC triage.

Vulnerability Assessment & System Hardening

Nmap · OpenVAS · Linux

- Scanned simulated Linux systems, prioritized findings using CVSS, and documented SSH, firewall, and patching hardening measures.

Crypto Trading Platform — University of London OOP Specialization

C++ · OOP

- Built a console-based trading simulation using encapsulation, inheritance, polymorphism, file I/O, and class-based exchange logic.

CERTIFICATIONS

Certified in Cybersecurity (CC) (ISC)²	Fortinet Network Security Fortinet
Certified Ethical Hacker (CEH) Cisco / NAVTTC Pakistan	Google Cybersecurity Certificate Google / Coursera
Google Cloud Cybersecurity Certificate Google Cloud / Coursera	IBM Cybersecurity Analyst Certificate IBM / Coursera

IBM and ISC2 Cybersecurity Specialist
IBM / (ISC)²

Object-Oriented Programming Specialization
University of London

EDUCATION & PRACTICAL LAB

B.Sc. Computer Science — University of Peshawar, Pakistan

OOP Specialization — University of London

Maintains a private VMware-based security lab with Windows Server 2019, Active Directory Domain Services, DNS, RRAS/NAT, a domain-joined Windows client, and isolated Linux security-testing VMs. Practical work includes domain-controller health checks, DNS/SRV troubleshooting, network validation, and technical documentation.

PROFESSIONAL STRENGTHS

ANALYTICAL THINKING
Evidence-led investigation and risk prioritization.

TECHNICAL COMMUNICATION
Clear findings and remediation reports.

REMOTE COLLABORATION
Git workflows, Slack, and agile teamwork.
